

IN THE CLAIMS:

Please AMEND claims 1, 6, and 11, as follows.

1. (Currently Amended) An information processing ~~A print control~~ apparatus serving as a host computer for processing a printing request from an application and forming print generating data which can be printed by a printer, comprising:
 - display control means for controlling a display unit to display an output setting view screen in which a value of an output setting item is set;
 - paper size setting means for setting an input paper size of a document which is inputted from the application and an output paper size of print data which is printed by said the printer via the output setting view screen displayed by said display control means; and
 - forming means for forming generating means for generating the print data on the basis of the input paper size and the output paper size which are set by said paper size setting means,
 - wherein when said the input paper size is set, said paper size setting display control means displays controls the display unit to display a paper size which is supported as the output paper size by said the printer and a paper size which is not supported as the output paper size by said the printer so that they can be discriminated from each other, and when the output paper size is set, said display control means controls the display unit to display a paper size which is supported by the printer, and
 - wherein a number of the input paper sizes is larger than a number of the output paper sizes.

2. (Original) An apparatus according to claim 1, wherein said paper size setting means sets the input paper size and the output paper size in response to an instruction which is inputted through a graphical user interface for performing a print setting.

3. (Original) An apparatus according to claim 1, further comprising printing method setting means for automatically setting a zooming print in the case where the input paper size which is set by said paper size setting means is the paper size which is not supported by said printer.

4. (Original) An apparatus according to claim 3, wherein in the case where the input paper size which is set by said paper size setting means is the paper size which is not supported by said printer, said printing method setting means automatically sets the zooming print as a setting of the printing method and, thereafter, can change the printing method by a manual operation.

5. (Original) An apparatus according to claim 1, wherein said paper size setting means adds a mark showing that the paper size is not supported to a position near a paper name of the input paper size corresponding to the paper size which is not supported by said printer and displays them.

6. (Currently Amended) An information processing ~~A print control~~ method of processing a printing request from an application and ~~forming~~ generating print data which can be printed by a printer, comprising:

a display control step of controlling a display unit to display an output setting view screen in which a value of an output setting item is set;

a paper size setting step of setting an input paper size of a document ~~which is~~ inputted from the application and an output paper size of print data ~~which is~~ printed by ~~said the~~ printer via the output setting view screen displayed by said display control step; and

a ~~forming~~ generating step of ~~forming~~ generating the print data on the basis of the input paper size and the output paper size ~~which are~~ set by said paper size setting step,

wherein in ~~said the~~ paper size setting step, when ~~said the~~ input paper size is set, a paper size which is supported as the output paper size by ~~said the~~ printer and a paper size which is not supported as the output paper size by ~~said the~~ printer are displayed so that said paper sizes can be discriminated from each other, and when the output paper size is set, said display control step controls the display unit to display a paper size which is supported by the printer, and

wherein a number of the input paper size is larger than a number of the output paper sizes.

7. (Original) A method according to claim 6, wherein in said paper size setting step, the input paper size and the output paper size are set in response to an instruction which is inputted through a graphical user interface for performing a print setting.

8. (Original) A method according to claim 6, further comprising a printing method setting step of automatically setting a zooming print as a setting of a printing method in the case where the input paper size which is set by said paper size setting step is the paper size which is not supported by said printer.

9. (Original) A method according to claim 8, wherein in said printing method setting step, in the case where the input paper size which is set by said paper size setting step is the paper size which is not supported by said printer, the zooming print is automatically set as a setting of the printing method and, thereafter, the printing method can be changed by a manual operation.

10. (Original) A method according to claim 6, wherein in said paper size setting step, a mark showing that the paper size is not supported is added to a position near a paper name of the input paper size corresponding to the paper size which is not supported by said printer and they are displayed.

11. (Currently Amended) An information processing ~~A print control~~ program which can be executed by ~~a print control~~ an information processing apparatus serving as a host computer for processing a printing request from an application and ~~forming~~ generating print data which can be printed by a printer, wherein said program allows the information processing ~~said print control~~ apparatus to execute:

a display control step for controlling a display unit to display an output setting view screen in which a value of an output setting item is set;

a paper size setting step of setting an input paper size of a document ~~which is~~ inputted from the application and an output paper size of print data ~~which is~~ printed by ~~said the~~ printer via the output setting view screen displayed by said display control step; and

a forming generating step of forming generating the print data on the basis of the input paper size and the output paper size ~~which are~~ set by said paper size setting step,

~~and said print control~~ wherein the information processing apparatus is executed in a manner such that in ~~said the~~ paper size setting step, when ~~said the~~ input paper size is set, a paper size which is supported as the output paper size by said printer and a paper size which is not supported as the output paper size by ~~said the~~ printer are displayed so that they can be discriminated from each other, and when the output paper size is set, said display control step controls the display unit to display a paper size which is supported by the printer, and

wherein a number of the input paper sizes is larger than a number of the output paper sizes.

12. (Original) A program according to claim 11, wherein said print control apparatus is executed in a manner such that in said paper size setting step, the input paper size and the output paper size are set in response to an instruction which is inputted through a graphical user interface for performing a print setting.

13. (Original) A program according to claim 11, wherein said print control apparatus is allowed to further execute a printing method setting step of automatically setting a zooming print as a setting of a printing method in the case where the input paper size which is set by said paper size setting step is the paper size which is not supported by said printer.

14. (Original) A program according to claim 13, wherein said print control apparatus is executed in a manner such that in said printing method setting step, in the case where the input paper size which is set by said paper size setting step is the paper size which is not supported by said printer, the zooming print is automatically set as a setting of the printing method and, thereafter, the printing method can be changed by a manual operation.

15. (Original) A program according to claim 11, wherein said print control apparatus is executed in a manner such that in said paper size setting step, a mark showing that the paper size is not supported is added to a position near a paper name of the input paper size corresponding to the paper size which is not supported by said printer and they are displayed.

16. (Original) A computer-readable memory medium which stores a print control program according to any one of claims 11 to 15.
